

GANTRY LINE

LARGE-VOLUME COORDINATE MEASURING MACHINES

EXCEPTIONAL EXPERTISE IN LARGE SIZE CMMS

Hexagon Manufacturing Intelligence's success is due to the quality of design and superior mechanical structure of its machines, which are supported by the most advanced technology and an extensive service and support network.

AN ABRIDGED LIST OF HEXAGON GANTRY CMM CUSTOMERS

Active tool	Brenner Tools	Famer	Kamaz	Northrop	Siemens

HEXAGON MANUFACTURING INTELLIGENCE THE BIG NAME IN GANTRY CMMS

Forty years of experience in designing, manufacturing and marketing CMMs and an installed base of over 1 900 gantry machines in 42 countries has secured Hexagon's position of world leadership in large-size CMMs.

Revolutionary through the years since the 1960s.

DEA ALPHA 2.0

BRIDGING THE PRICE / PERFORMANCE GAP IN GANTRY CMMs

An innovative product line of cost-effective, medium-capacity multisensor gantry CMMs, the DEA ALPHA 2.0 combines high throughput and high accuracy with excellent operating reliability and minimal maintenance.

DEA ALPHA 2.0 is available in two versions, DEA ALPHA 2.0 Classic, and DEA ALPHA 2.0 Performance.

DEA ALPHA 2.0 Classic is an all-purpose flexible CMM for the dimensional inspection of large castings and machined parts. Equipped with a high-productivity 3D scanning laser head and continuous servo wrist options, DEA ALPHA 2.0 Classic can rapidly acquire millions of data points from complex contoured shapes, and is the ideal system for die and mould manufacturing support.

DEA ALPHA 2.0 Performance is a high-performing gantry CMM that, thanks to a high-rigidity silicon carbide spindle and a sophisticated multisensor temperature compensation system, guarantees high accuracy and ease of use under all operating conditions.

All DEA ALPHA 2.0 models can be supplied equipped with optional bellows and covers, which offer machine protection for airborne shop contaminants.

DEA DELTA SLANT

THE PERFORMANCE STANDARD IN GANTRY CMMS

DEA DELTA SLANT is a mid- to large-sized gantry coordinate measuring machine that is the outcome of the many years' experience offered by Hexagon in the design and construction of gantry CMMs.

Thanks to years of engineering expertise, DEA DELTA SLANT offers a range of sizes and accuracies at unbeatable price/performance ratios. DEA DELTA SLANT adopts Hexagon's latest technological innovations, like

the main X traverse beam made of extruded aluminium with patented TRICISION® design, dual reader on the Y beams, as well as the most advanced automatic compensation system for geometric errors, that handles 26 different parameters (Performance version). All DEA DELTA SLANT models are equipped with a structural multisensor temperature compensation. DEA DELTA SLANT is available in two versions, DEA DELTA SLANT Classic and DEA DELTA SLANT Performance.

The flexible DEA DELTA SLANT Classic measurement system is a perfect blend of metrology performance, versatility and affordability.

DEA DELTA SLANT Performance is the ideal system for applications requiring higher accuracies and shorter measurement cycles. The typical applications of DEA DELTA SLANT are mid- to large-sized components of the automotive, aerospace, heavy transport, railway, wind energy and die and mould industries.

DEA DELTA SLANT has the whole range of Hexagon probes and probe heads available – from the versatile and effective indexable probe heads range, through the fixed continuous scanning heads, to the HH-ACW-43MW continuous wrists.

To allow the use of DEA DELTA SLANT systems in industrial environments without air-conditioned enclosures, all models may be configured in the Shop Floor (SF) version. This specialised kit consists of covers and bellows for the whole machine structure, including the forced ventilation along longitudinal beams.

DEA LAMBDA

HEAGON

21

DEA LAMBDA SP

THE HI-TECH GIANT CMMS

DEA LAMBDA SP is a line of very large measuring machines designed for operation in industrial environments. They excel in the high-speed, high-accuracy inspection of huge components, such as marine engines, aircraft structures and turbines, that require open, modular, easily customisable structures with virtually unlimited measuring volumes.

A proprietary dual drive/dual encoder system on the Y axis simulates a virtual single axis located at the centre of the carriage. Carriage yawing and structure deformations during motion are monitored by a distributed sensor system and compensated in real time. This unique configuration prevents the yawing of the carriage, ensuring higher dynamics and superior measuring accuracy.

All axes and pillars are protected by wraparound thermally insulated covers and bellows. Internal forced air circulation eliminates temperature stratification. An advanced multisensor temperature compensation system ensures nominal measuring accuracy over an extended ambient temperature range. High-performance servo wrist options handle exceptionally long probe extensions for full accessibility to all part features.

SOPHISTICATED TECHNOLOGY

SUPERIOR LONG-TERM ACCURACY

- Conservative FEA design reduces structural deflections
- Real-time correction of up to 26 geometrical parameters (DELTA SLANT Performance)
- Extra-large bearing proportions and generous stiffness/mass ratio
- High-rigidity large section Z spindle
- High-resolution scales
- Vibration isolation options

EXCELLENT PRODUCTIVITY AND FLEXIBILITY

- Low-mass aluminium alloy moving members
- Maximum acceleration – control of jerk
- Continuous motion interpolation
- Automatic optimised tuning of servo parameters
- High-throughput non-contact sensor options
- Optional servo wrist rotates while the machine moves
- Integrated flexible fixturing options

RELIABLE DESIGN FOR EFFECTIVE INTEGRATION

- Lower maintenance requirements
- High calibration stability
- Reduced field adjustments
- Easy access to all machine components
- Wear- and damage-free use

EXTENDED SYSTEM AVAILABILITY

- Proven heavy-duty machine design
- Multiple enclosure options
- Partial/full covers
- Thermally insulated
- Pneumatic safety brake on the Z spindle
- Industry standard compliance

SAFE OPERATION IN WORKSHOP ENVIRONMENTS

- Y axis guideways are free to expand without distorting
- Scales with certified coefficient of temperature expansion
- Thermally stabilised machine versions
- Thermally-insulated enclosure versions
- High-efficiency temperature compensation

DIVERSE FIELDS OF APPLICATION

DIE AND MOULD MANUFACTURING

Hexagon's gantry machines provide an advanced tool for model making, die prove-out, inspection analysis and failure analysis.

- High-accuracy, high-productivity surface mapping capabilities are supported by automatic tactile scanning systems and ultra-high-speed non-contact scanning head options that acquire millions of data points from the model real surface
- Efficient CAD interfaces allow the export of processed surface point files to CAD/CAM systems for the generation of machining tool paths

SURFACE DESIGN AND METROLOGY

An interactive computer graphic environment for the dimensional verification and CAD modelling of freeform surfaces streamlines:

- Reverse engineering operations for the creation, maintenance and modification of CAD models directly from actual parts
- The efficient incorporation of design and manufacturing changes back into the CAD database
- The quick and complete verification of complex freeform shapes and features directly from their nominal CAD geometry

DIMENSIONAL INSPECTION

Hexagon's gantry machines excel in inspecting large and very large mechanical parts, high-precision machined components, and large automotive and aerospace structures, all with superior accuracy. The application is supported by:

- A complete metrology CAM package: bi-directional direct CAD interfaces allow establishing common manufacturing practices driven from CAD databases
- An interactive graphic user interface, that includes a 3D animation of the full machine kinematics including part and fixtures, and flexible graphical reporting functions
- Advanced scanning options that increase data point density and improve feature dimension, location and form analysis, while enhancing system throughput

PROBING THE DIFFERENCE

A WIDE RANGE OF HIGH-PERFORMANCE PROBE HEADS AND MEASUREMENT SENSORS

HH-A-T5°

HH-A-T5° is a motorised articulating probe capable of rotating two axes in 5° increments, which translates to a total of 2 952 possible positions. The robust aluminium construction and rugged design permits extension rods with lengths over 300 mm. The TKJ kinematic joint connection allows direct docking with continuous scanning probes or, coupled with an M8 adaptor, it can be used with HP-TM touch trigger probes as well as probes from other manufacturers.

HH-A-2.5

The HH-A-2.5 is a motorised probe head in the Hexagon sensor line; the head features a number of innovations including an embedded controller and capacitive crash protection, while positioning is achieved by use of a Hirth gear. The HH-A-2.5 also benefits from a completely redesigned drive system. The HH-A-2.5 is available in two versions:

- **HH-A-T2.5 AUTOMATIC TKJ PROBE HEAD**
The head is fitted with a kinematic joint (TKJ) that can be connected to a multiwire to give multisensor support. The TKJ can be changed either manually or automatically (with the HR-R probe changer) without the need for requalification. The probe is capable of indexing in 2.5° increments and can achieve 12 240 unique positions.
- **HH-A-H2.5 AUTOMATIC HDKJ PROBE HEAD**
The head is fitted with the Heavy Duty Kinematic Joint (HDKJ), which can carry extensions of up to 750 mm and can also be connected to a multiwire to give multisensor support. Laser scanner and analogue scanning heads can be supported further from the axis of rotation than with conventional heads due to the combination of extreme rotational torque and the design of the HDKJ adaptor. The HDKJ can be changed either manually without the need for requalification or automatically with the HR-R tool changer fitted with the optional HR-RH Heavy Duty Module. The probe is capable of indexing in 2.5° increments and can achieve 20 736 unique positions.

HP-S-X5

Ultra-precise, full 3D, fixed scanning head capable of simultaneously measuring in the X, Y, and Z directions to precisely define the orientation of the workpiece surface. This heavy-duty analogue probe features very high and repeatable accuracy even with extra-long probe extensions and heavy styli clusters (up to 500 mm in length and 500 g in weight, the HD version with extension up to 800 mm is available on request). It features a proprietary anti-collision system offering extra protection for the head. An automatic tool changing capability allows styli changes within a measuring program without the need for probe requalification.

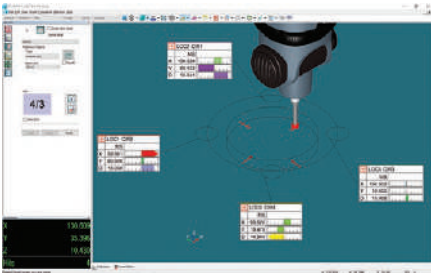

HP-S-X1

The HP-S-X1 is a high-accuracy 3D scanning sensor that can take thousands of points quickly and automatically. The HP-S-X1 allows a thorough evaluation of the measured geometric features, including form, position and size error. It is offered in two different probe types, HP-S-X1S and HP-S-X1H, each optimised for specific styli length ranges. This sensor uses the same technology as other probe heads in the HP-S-X range. Thanks to the TKJ adapter, HP-S-X1 can be changed using the HR-R probe changer rack, while fast and repeatable styli changes are possible with the HP-S-X1 styli changer rack due to the magnetic stylus holder.

PC-DMIS

LEADING-EDGE MEASUREMENT SOFTWARE

Available in three different versions and with a number of optional packages, PC-DMIS measurement and inspection software provides the most comprehensive solution to any kind of metrology applications.

PC-DMIS PRO

Complete Metrology Software

PC-DMIS PRO provides the basic intuitive graphic user interface (without CAD), including a suite of wizards to help operators quickly learn and manipulate key inspection functions. Features include:

- A full programming environment including high level programming functions
- Customisable menus
- Quick Start routines for probe qualifications, part alignments and hyper-reporting functions
- Intuitive Probe and Go to automatically recognise feature types and create interactive graphical part representations

PC-DMIS CAD

Adds the Ability to Import CAD Files

PC-DMIS CAD includes all PC-DMIS PRO functionalities, plus:

- Full 3D animation capability including digitised images of parts and fixtures on the machine so operators can visually verify the setup and program prior to actual part inspection
- Unknown part documentation to generate computer models for reverse engineering applications
- Native download of VDAFS, IGES, DXF, DWG, STEP, XYZIJK, STL, DES and DMIS formats
- A Direct CAD Interface (DCI) option to create part programs directly from CAD models utilising the native CAD system algorithms and tools
- A Direct CAD Translator (DCT) option allows the use of a native CAD model even when the specific CAD system is not owned by the user

PC-DMIS CAD++

Adds Scanning and Thin-Walled Parts

In addition to all PC-DMIS PRO and PC-DMIS CAD functionalities, PC-DMIS CAD++ incorporates scanning and digitising functions that allow fast and efficient measurement of complex shapes such as turbine blades, dies, models, sheet metal components and other curved shapes. Features include:

- Rotary, patch, linear open and closed loop scanning
- Perimeter, section, UV and edge point scanning
- Complete probe simulation
- Full thin-wall feature measurement suite

A STANDARD OF QUALITY SECOND TO NONE

The quality and reliability of Hexagon's gantry CMMs results from the accuracy of the manufacturing techniques and total quality control procedures adopted, plus the rational interaction of skilled workers with high-technology production equipment.

FULL MACHINE PERFORMANCE CERTIFICATION

The performance of all machines is checked and certified through the most rigorous application of the test procedures specified by stringent international standards for CMMs (ISO, ASME, VDI/VDE). The tests include:

- The verification of the maximum permissible error of indication for size measurement
- The verification of the maximum permissible probing error
- The verification of the maximum permissible scanning probing error

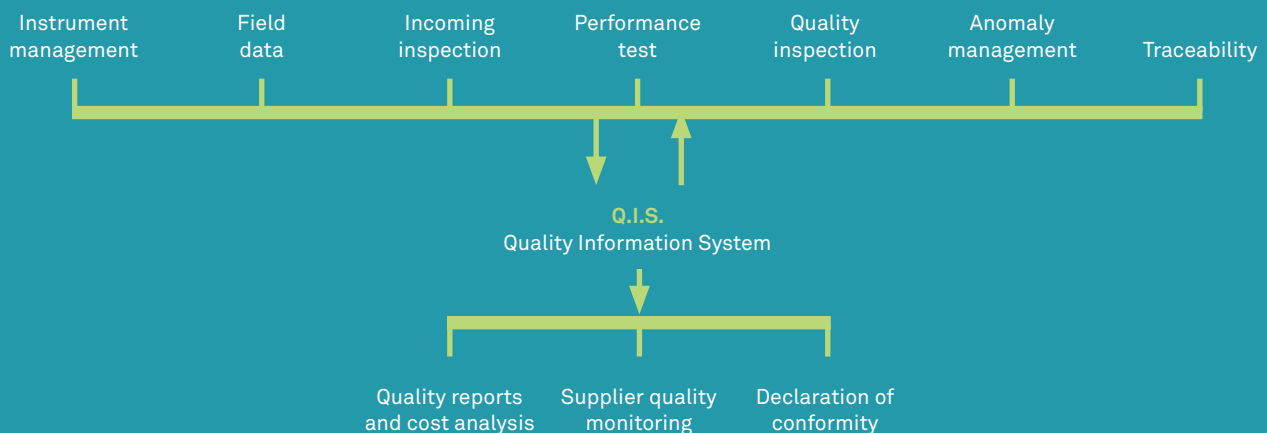

A COMMITMENT TO QUALITY

The company's exclusive Quality Information System (QIS) monitors in real time the quality of each machine produced and its compliance with the specified standards.

All aspects of the activity carried out by Hexagon, from product design and manufacturing to delivery and customer service, have been reviewed and found to meet internationally-accepted quality standards.

ISO 14001 ISO 9001 VDA 6.4

Hexagon Manufacturing Intelligence helps industrial manufacturers develop the disruptive technologies of today and the life-changing products of tomorrow. As a leading metrology and manufacturing solution specialist, our expertise in sensing, thinking and acting – the collection, analysis and active use of measurement data – gives our customers the confidence to increase production speed and accelerate productivity while enhancing product quality.

Through a network of local service centres, production facilities and commercial operations across five continents, we are shaping smart change in manufacturing to build a world where quality drives productivity. For more information, visit HexagonMI.com.

Hexagon Manufacturing Intelligence is part of Hexagon (Nasdaq Stockholm: HEXA B; hexagon.com), a leading global provider of information technologies that drive quality and productivity across geospatial and industrial enterprise applications.
